AccuStandard®

Cannabis Standards

AccuStandard offers a comprehensive list of standards for testing the quality and safety of cannabis and hemp products for both medicinal and recreational purposes. Standards for testing include: pesticides, residual solvents, terpenes (for strain and flavor profiling), heavy metals, and active cannabinoid compounds. US State specific cannabis standards, including regulatory standards for Canada.

Hemp

Different cultivars of cannabis plants are used in various ways. Plants that have been bred to have higher THC content are for medicinal and recreational uses, and those bred to have lower THC levels can be used for hemp production. Hemp is a crop that is harvested for the fibers of the plant and can be used to make clothing, paper, and other products. Currently, USDA regulations stipulate hemp crops must be below 0.3% w/w for total delta-9 tetrahydrocannabinol (considering both THC and THCA) on a dry weight basis of the sample.

Compound	CAS	Cat. No.	TK No.	1,000 µg/mL Solvent	Unit

Cannabis Odor

Volatile Sulfur Compounds (VSCs) are a group of chemical compounds that have been evaluated for its possible role in enhancing cannabis products flavor and aroma. These CRMs are designed to help test for traces of VSCs in cannabis to help investigate that role and its potential therapeutic advantages.

Canada Cannabis Regulatory Standards

Canada requires Licensed Producers (LPs) to submit samples of all cultivated cannabis products to independent laboratories for testing of almost 100 pesticides. The Pesticide Management Regulatory Agency (PMRA) has maintained a database that includes 22 registered pesticides for use on cannabis products. Recreational use of cannabis has been legal in Canada since October 2018. Health Canada (HC) maintains mandatory testing requirements for cannabis products to assure a healthy product for the end user. Below is the current published listing of regulated pesticides that have been approved by the Government of Canada, for both recreational and medicinal usage.

Technical Note

Testing of heavy metals is important because metallic impurities can be absorbed from the soil when the plant grows, or can be introduced during preparation of the saleable product.
